The examiner acknowledges receipt of the information disclosure statement filed 27 January 2004. An initialed copy of the citation form should accompany this letter.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the reference pulse from the burst fed to the comparator such that based on the reference pulse, in the comparator, a signal value is processed must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Regarding claim 3 and the drawings, no path from the input to the reference terminal of the comparator is illustrated. Only the output of the DAC is shown as supplying the reference terminal of the comparator. Claim 3 seems to suggest that there is some path which has not been illustrated exists so that the signal may be processed "based on the reference pulse"

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement

Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 6 rejected under 35 U.S.C. 102(b) as anticipated by Veerhoek et al. (US 507841 A). Veerhoek et al. discloses is figure 1 a comparator 11, an electronic component 1 to generate the desired digital signal using an iterative fashion using a balancing process producing a defined number of bits that defines the upper and lower thresholds. The successively defined desired digital signal is fed to the DAC 7 to provide an analog signal to the comparator as the reference signal such that based on the reference signal the signal is processed.

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 20010038352 A1 Bardelli et al.

US 4831382 A Debus, Jr et al.

US 4768109 A Matsuo

Each of the first five patents above are specifically directed towards analog-to-digital converters using an iterative process. The last patent to Matsuo is directed to video signal processing and includes sampling of the input signal.
